Dear Rosalind,

Many thanks for sending me a copy of your paper, which I read with great interest. I have pencilled one or two suggested amendments and those on page 5 and 7-8 I think you should treat seriously whatever you do about the others.

We have some purified potato virus X at the moment, and would give you some if you could make use of it almost immediately. I say this because potato virus X is unstable and can't be kept hanging around indefinitely like tobacco mosaic virus. We have uses for it, and so I don't want to send it to you just to spoil in your refrigerator, but you are welcome to some if you can use it.

With kind regards,

Yours sincerely,

F.C. Bawden

tell me your minimum need about 40-50 mg if needed, but
